To calculate the *number of modules* required for the floor area, divide the total floor area by the total square footage of each module. Hence, for this pattern, a 300 sq ft floor would require:

$$300 / 22.24 = 13.49 \text{ modules}$$

size	module composition		total sq. ft.	x	number of modules	x	sq ft req'd of each tile
	pieces	sq. ft. / pc.
